CEO & Co-founder

ACEL POWER,
Vancouver, BC

The marine industry is entering a pivotal era—one where sustainability, intelligence, and performance must converge. Electrification is no longer a question of if, but when. The opportunity lies in how strategically and intelligently we respond.

At ACEL Power, we're building more than propulsion systems. We're developing an integrated, software-driven platform that redefines performance, safety, and control on the water. Our Intelligent Electric Series marks a systems-level transformation—delivering high-efficiency, low-maintenance solutions that reduce environmental impact without compromising on power.

We're collaborating with boat builders, dealers, and engineers who share our belief that electric vessels should exceed expectations—in silence, responsiveness, and reliability. Our modular and scalable approach ensures we evolve with the industry's growing demand for decarbonization and digitalization.

We're proud of the momentum we've built and even more excited about what's ahead. Thank you for your trust as we chart the future of marine propulsion—electric, intelligent, and inevitable.
